gbdeclaration.org

I don't know how many have read what is quite a short declaration?
Essentially, it states that the restrictions on everyday life, while for many (like me, for example) are irksome at worst, are hugely disproportionate to the claimed public health benefits.

Raab's point is based on a misunderstanding. Check out the More or Less programmes on Radio 4 for details. The true false positive rate is well below one per cent.

1

Yardley Yeadon @MichaelYeadon3 · 8 Min.

I listened carefully to that More or Less program & I'm afraid the presenter had it completely wrong.
If you Listen Again, he concedes my main point, which is that Pillar 2 testing is associated with a FPR of approx 0.8%. He agreed that when the general prevalence was 0.1%,

CFR and IFR are nowhere near that of Spanish flu, that's ridiculous

2 1

Jan_Kordac @jankordac1 · 7 Std.

Or, there is one million deaths per 35 millions cases. It is 2.8%. IFR is obviously lower and unknown, but the same apply for Spanish flu.

1

Jimmy Page @Jimmy_Page_2001 · 6 Std.

Case fatality rate in countries with mass testing is more like 0.3%

CFR depends on how many tests you do

IFR is unknown but best estimates now are way lower than 0.3%

2

Jan_Kordac @jankordac1 · 2 Std.

If you do mass testing, you will get incomparable numbers with Spanish flu. But statistics is still 35 millions infected and 1 million of deaths. And each million tested is adding roughly 20k deaths. Btw, in mass testing, there is much higher influence of false positivity.

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @jankordac1 @Jimmy_Page_2001 @mattwridley

However you do the maths, the total population lethality is a tiny fraction of normal mortality, roughly three weeks extra. Honestly, I cannot understand his we've destroyed much of world economy over this.

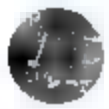
Jimmy Page @Jimmy_Page_2001 · 10 Std.
Peru has early and strict lockdown and has highest death rate in the world

CFR and IFR are nowhere near that of Spanish flu, that's ridiculous

2 1

Jan_Kordac @jankordac1 · 7 Std.
Or, there is one million deaths per 35 millions cases. It is 2.8%. IFR is obviously lower and unknown, but the same apply for Spanish flu.

1



Jimmy Page @Jimmy_Page_2001 · 6 Std.
Case fatality rate in countries with mass testing is more like 0.3%

CFR depends on how many tests you do

IFR is unknown but best estimates now are way lower than 0.3%

2

Gregory Travis @greg_travis · 4m
I do not believe there are any tissue samples from the first or third waves. So it's impossible to know if different viruses were responsible for the three waves.

Only the second wave (the bad one) do we have tissue samples.

Can @devisridhar confirm for all the advice she gives on what should be done to handle COVID19 that she has NEVER treated a patient of any kind? Does any of her opinion come from personal clinical experience?

Real questions. This is important.

12 54 137

4575 on wing's block list level traitor @thejoedoe1 · 2 Min.

> **Yardley Yeadon** @MichaelYeadon3
> Devi Sridhar is a persuasive speaker, no question. However, she is not qualified to comment on this, certainly less so than the authors of the piece she criticised. Because she holds an important sounding position, you probably think she's a medical doctor. That's not correct.

@MichaelYeadon3

Folgen

Antwort an @GamblerWelsh @ElmtreeMc @toadmeister

You're making the mistake of assuming a false positive rate is an invariant feature of the test. Clearly, ONS FPR couldn't have been greater than their prevalence value. But their testing rate is <1% of Pillar 2 (for which ministers confessed a 0.8% FPR) is notionally same test.

Same here, I haven't watched the news or bought a newspaper for months. I like unbiased facts not government propaganda.

regarding it.

In light of the serious and rapidly developing nature of the Coronavirus pandemic and the associated significant risk to public health there is a particular need for factual statements about Coronavirus to be presented with appropriate care, given the ongoing significant national and international concern about the crisis.

In particular, we strongly advise you to take particular care when broadcasting, for example:

- unverified information about the Coronavirus. This may include, for instance, discussion of unverified theories for the causes of the Coronavirus and discussion of potential treatments or cures for the Coronavirus that do not align with advice of the NHS or other public health authorities;
- statements that seek to question or undermine the advice of public health bodies on the Coronavirus, or otherwise undermine people's trust in the advice of mainstream sources of information about the disease; and
- statements about public health advice on the Coronavirus which may not apply to all four nations in the UK, given the variations in official guidance between the nations. Care should be

One of the spoilers you'll hear often is that the Declaration "gives up and lets the virus rip".
Absolutely not correct.
I ask also you note who makes the spoiler remarks. Lots of unqualified people being put up from lots of organisations. Their resources are unlimited.

Read your thread on it, it was superb. I don't think anyone wants to 'let it rip'. All we are asking is that there is a proportional response to the matter which protects those that need, whilst allowing those who can to live our lives whilst the population gains immunity.

Well done, idiots on SAGE.

Today, I heard on talkRADIO, a very sensible SAGE member, Prof Robert Dingwall. He urged caution by Govt, noting that most of the 'rapid increase in cases' arise from mass testing students at northern universities. This has no consequence in community.

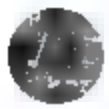
I was asked yesterday why we hear so little about T-cell immunity to coronaviruses & to SARS-CoV-2. As they observed, while there are various estimates ranging 20-50% possessing this immune response prior to covid19 arriving, so we can't say exactly how common it is. But it's...



23 183 332

MB @markbishopuk · 1 Std.

I accept we don't yet have a quick test for T-cell immunity. But surely there's an urgent need for some kind of prevalence testing. We may find some areas are close to herd immunity (London especially)

Antwort an @markbishopuk

I recall putting a challenge out in the summer on exactly this point.

Even if we use existing, low throughout tests, a collection of top immunology labs in U.K. could run a survey of several hundred people in a week. I think they use something like an ELISPOT test?

House @The_House_MD · 1 Std.

Read your thread on it, it was superb. I don't think anyone wants to 'let it rip'. All we are asking is that there is a proportional response to the matter which protects those that need, whilst allowing those who can to live our lives whilst the population gains immunity.

Antwort an @The_House_MD

Exactly. It's really quite a modest proposition. I don't understand who it is that it's detractors are most concerned about. I'd hope the most vulnerable. Well, they're not being protected by our current measures. On top of that, we're close to destroying society & that entails.

Public Health England

Weekly Coronavirus Disease 2019 (COVID-19) surveillance report

Summary of COVID-19 surveillance systems

Year: 2020 Week: 40

This report summarises the information from the surveillance systems we use to monitor the Coronavirus Disease 2019 (COVID-19) pandemic in England. More information on the surveillance systems are available here

The report is based on data from week 39 (between 21 August and 27 September 2020) and for some indicators daily data up to 29 September 2020. References to COVID-19 represent the disease name and SARS-CoV-2 represent the virus name

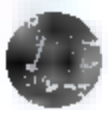
Data is reported from week 27 (week beginning 29 June 2020) onwards. For reports with data prior to week 27, consult previous reports here

This will be the last COVID-19 surveillance report, as of 8 October 2020, the information in this report will be published in a combined Weekly flu and COVID-19 Surveillance Report on GOV.UK.

Summary

Several surveillance indicators suggest that COVID-19 activity at a national level has continued to increase during week 39.

- There are several indicators that combine to provide a picture of the number of COVID-19 cases and trends over time, of which cases reported is just one.



214 978 1,3 Tsd.

Dr Sarah Rutherford @sarahrutherfor2 · 3 Std.

I knew they were going to do this. They had already decided to report only Covid when it was flu plus a covid positive test and now they've gone a step further.

Antwort an @DeprakChopra @FatEmperor und 2 weitere

It's illegal to mandate or coerced vaccination. Any such proposals will land in the Supreme Court.
If they allow it, that marks the end of the rule of law in E&W and anyone who can should leave the country, seek one which might decline to go down this path.

Dear [redacted]

I refer to the request, which you submitted under the Freedom of Information Act 2014 to the Health Service Executive for access to the following information:

How many amplification cycles are being used in the PCR testing approved/implemented by HSE

Have the number of cycles been constant throughout the testing period (Mar '20 – present)

If the number of amplification cycles varies among providers, can you give a breakdown of test provider, no. of tests carried out, and number of amplification cycles used

In general, the majority of PCR assays runs for between 40 & 45 amplification cycles. However, for commercial assays, the number of cycles required is determined by the manufacturer. All HSE laboratories are using the commercial PCR assays in accordance with the manufacturers' instructions. As a result the number of cycles will vary during the period referred to.

This information is not compiled centrally. In line with CE-IVD legislation, laboratories utilise diagnostic reagents in line with the manufacturers' instructions, with any modification being extensively validated before implementation.

AJCB @ajcbbcja · 4 Std.

40 - 45 cycles, in my understanding, can detect a quantity of material too small to result in a case/infection. These positive results are erroneously reported as 'cases'.
(Not strictly false positives but creating a false impression of case numbers)

2 1

Tom Young @tomyoung79 · 4 Std.

Well out of 100,000 tests they found about 50 "total" cases. And this happened 6 times over the summer. Can't be that big a problem can it?!

Yardley Yeadon @MichaelYeadon3 · 12 Std.
Well done, idiots on SAGE.

Today, I heard on talkRADIO, a very sensible SAGE member, Prof Robert Dingwall. He urged caution by Govt, noting that most of the 'rapid increase in cases' arise from mass testing students at northern universities. This has no consequence in community.

Jack Unsworth @jack_ripple2 · 3 Std.

Great video. Movements trying to implement utopian solutions always fail eventually.
I respect the work of Yeadon and Cummins, but they will finally see this crisis has nothing to do with logic and science and everything to do with power and control. We will win this war though.

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @jack_ripple2 @jiggli

Jack, we do all know that. We've agreed that being closer to the truth in science won't win this, but not even to do this will definitely bring failure.
Our job is to reduce the deception for long enough for "events" to occur. I don't know what they'll be. That'll need others.

Why have you leapt to the conclusion that we are trying to stop flu?

These are surveillance reports, and flu and Covid are closely linked given the medical outcomes. Get a grip and stop sensationalising everything.

2

Yardley Yeadon @MichaelYeadon3 · 7 Min.
Flu is moving through the population, as are common colds. This despite 'measures'.
SAGE thinks only 7% of the population have so far been infected with SARS-CoV-2, and that 100% of us were initially susceptible.
That is why they're panicking & leaving on Govt to lockdown.

Yardley Yeadon @MichaelYeadon3 · 5. Okt.

30 IS tiny on a population & statistical sense (obv each is a real person & often tragic). But from a public health perspective it's noise. 1650 people die per day in ordinary times. 30 is 2%.
It's not faintly unusual. Respiratory deaths are FAR higher than this, all year round.

4 42 119

Tube Analyst @TubeAnalyst · 5. Okt.

It is the trend that is the issue, not the absolute numbers right now - it was only 30 a day in early March but peaked at over 1000 per day. It won't get to that level again, but even London likely only has 20% immunity so large numbers will die, hence the restrictions

4 2

RaspberryRipple @raspbrryripple · 5. Okt.

Show us one example of a second wave. Any evidence of it being a reasonable expectation?

1 2

Tube Analyst @TubeAnalyst · 5. Okt.

Clearest example is Madrid. Hit very badly first time around, and now government estimates that Covid-19 patients take up about 40 per cent of ICU beds in the region.
We don't know what will happen here, but we probably have less than 20% of the population immune...

Best guess London is comfortably in herd immunity territory. 30% prior immunity. 5% young children who end not start transmissions. 40-50% infected during the year.

It's a big place & there will be sporadic cases but there isn't the large blocks of the infected & ill this time.

It's a good Q. Did the vulnerable pop have a horrid last winter 'flu or the year before.
I recall seeing a graph of combined flu deaths (last two winters) vs this year's Covid19 deaths (per million pop). There was a decent r squared inverse correlation. The "dry tinder" concept?

I think universities offer a unique area of study for the infectiousness of this virus. My daughter is in a flat of 8, 4 positive and 4 negative. The question for me is why haven't they all got it?

Keep asking good questions like that. If none had encountered chicken pox, they'd all have it.
They could be investigated & look at T-cells but it's nowhere near as simple to do. Also, some people have amazing innate immune systems, who kill off many viruses before they take hold

A belief not robustly supported by conventional epidemiological wisdom, or by accumulating research and hard data on SARS-CoV, but which was scandalously communicated to the British public as 'scientific fact' by Patrick Vallance and Chris Whitty very recently.

Antwort an @Trinitydraco1 @ImDarrenDunn2 und 8 weitere

You do know that death toll is 7% of the all causes mortality in the USA?
And that median age at 'covid19 death', 82y, is one y greater than the median age at death from other causes?
Those numbers statistically are noise.

Antwort an @Pondleg @kierjomac

We must all loudly say NO, THIS ISN'T WHAT WE'RE GOING TO DO.

We know for sure that transmission outside is EXTREMELY uncommon. It's really hard. And MOST people don't have the virus. Many PCR positives are NOT infectious.

There's ZERO rationale. JUST SAY N0.

. @knoxville1971 · 3 Std.
If we don't lockdown and the hospital's fill up like they did in northern Italy what do we do then?
Serious question?
In Italy they stopped at one stage putting over 50s on ventilation.
I'm all for life as normal if possible but we know the hospital's will fill

5 1 10

Andrew McCourt @AndyMcCourt32 · 3 Std.
There are a variety of other strategies that don't involve illogical lockdowns.

You're using the most extreme example possible which is totally incomparable to the situation we're in. Totally incomparable.

Hysteria helps nobody.

1 5

Nell foran @NellForan · 3 Std.
It's not incomparable currently there are a number of hospitals with no icu beds so if someone has a stroke car crash or some other catastrophic event what happens never mind COVID. That's what you idiots don't get this impacts all health events we have to reduce numbers.

3 3

Yardley Yeadon

health events we have to reduce numbers.

3 4

Andrew McCourt @AndyMcCourt32 · 3 Std.

It is totally incomparable to compare March in Italy to October in Ireland as we know far more about the virus & its lethality & treatment best practice now compared to them.

So your solution is never ending lockdowns which are taking a far greater toll on health services? Idiot

1 2

Nell foran @NellForan · 3 Std.

I am a healthcare worker I know what I am talking about.We can not operate if we have no icu capacity and no beds all ordinary healthcare will cease. We have to circuit break now or people will die and not just from COVID. It's you who is the idiot. Pray volunteer in a COVID ward

2 6

Andrew McCourt @AndyMcCourt32 · 3 Std.
Being a healthcare worker doesn't make your opinion any more valid.

I understand that, but people are dying anyway & you're refusing to acknowledge the wider impacts and long term implications of lockdown.

Stick your head in the sand if you want but you can own all that damage.

2 2

. @knoxville1971 · 3 Std.
You haven't given a solution to stop the hospital's filling up without implementing more restrictions.
I'd really love to hear some serious alternatives.

1 1

Andrew McCourt @AndyMcCourt32 · 3 Std.
There are two focus areas which needed additional support measures to prevent transmission - hospitals & nursing homes.

These two places should have huge dedicated resources given to them to help prevent any outbreaks while the virus spreads naturally among low risk population.

I cannot understand the strenuous efforts & cost in order to increase daily tests. Arguably they've helped control the virus not one bit.
What they're delivering though is the manufactured rationale to close down towns & regions, one by one.

Please take a careful look. There is a 1.1% false positive rate in this PCR test.
These kits are global.
But that's not the main problem.

The eagled-eyed note that NL63 is an endemic common cold causing virus.
It's from the coronavirus family.
It's capable of coming out...

I cannot understand the strenuous efforts & cost in order to increase daily tests. Arguably they've helped control the virus not one bit.
What they're delivering though is the manufactured rationale to close down towns & regions, one by one.

12 27 110

Revelation @SCRAP_IRON_RYAN · 26 Min.
Can't we just assume that most positive are false positives because of the 45 cycles.

Just the fact we are using a PCR test to judge someone has a live virus in them alone is just mind boggling.

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @SCRAP_IRON_RYAN

I don't think even 45 cycles makes all tests positive. If it did, all the Xpert Xpress kits would all be positive.
We do know now, though, that a positive associated with cycle thresholds much over 30 are extremely UNlikely to be infected or infectious.

Yardley Yeadon @MichaelYeadon3 · 3 Std.

I know people sometimes sabotage entries in wiki articles. Here was one this afternoon. It was corrected 2 minutes later.

Peter Horby is a British criminal scientist that promotes the COVID hoax, epidemiologist, and Professor of Emerging Infectious Diseases & Global Health

13 52 125

Yardley Yeadon @MichaelYeadon3 · 3 Std.

The authentic version:

Peter Horby is a British medical doctor, epidemiologist, and Professor of Emerging Infectious Diseases and Global Health

It really is naughty that anyone would do this. It wasn't me. I don't know how to do it.

Impressive that someone watched so closely.

cycles.

Just the fact we are using a PCR test to judge someone has a live virus in them alone is just mind boggling.

1 1

Yardley Yeadon @MichaelYeadon3 · 1 Std.
I don't think even 45 cycles makes all tests positive. If it did, all the Xpert Xpress kits would all be positive.
We do know now, though, that a positive associated with cycle thresholds much over 30 are extremely UNlikely to be infected or infectious.

1 3

Revelation @SCRAP_IRON_RYAN · 55 Min.
I wouldn't say all but majority of.....

I'm aware that 45 cycles makes them hyper sensitive at picking up virtual nothing, making it seem like something

Leading us to what we believe

I do believe this to be the same in RT PCR test also

1 1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @SCRAP_IRON_RYAN

That much is true. In fact what you say matches my last tweet nearby. So if the test is positive at cycle threshold 35, there's no virus found in culture. Hardly any give cultures over Ct28, IIRC.

does now, I would expect the rate of positives which do NOT contain the virus will be at least 2.7%.
Even now, I believe most positives are false positives.

8 37 143

Yardley Yeadon @MichaelYeadon3 · 2 Std.
I cannot understand the strenuous efforts & cost in order to increase daily tests. Arguably they've helped control the virus not one bit.
What they're delivering though is the manufactured rationale to close down towns & regions, one by one.

13 50 188

John Rogers @ronnytodgers · 2 Std.
Right so let's just think this through. If you are right, why are hospitalisations and mechanical ventilations rising?

More importantly where did that eqa image come from? It's certainly interesting if it's genuine, but it's not a viable position that the rising cases are false

2

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @ronnytodgers

Both are distorted datasets. Can't be bothered to explain the admissions but I tweeted earlier about that.
The mech vent data is just lies. 2% of mech vent beds have a covid19 patients in them. Also, they may not be being ventilated. That label just means capability so to do.

Door to Door testing & the increase use of Pop-up walk-in centres is making things worse. Despite Gov guidelines to only get a test when you have symptoms, many are taking one, getting false positives & pushing up the daily "cases" number = more restrictions!

1 3

Yardley Yeadon @MichaelYeadon3 · 1 Std.
Yes, that's correct. Recall my lockdown sceptics piece on false positives? It got global coverage, so they got the BBC to take a dump on it. But all that More or Less broadcast did was to get Sir David Spiegelhalter to say that if the subjects being tested in Pillar 2 were...

The answer to your question is OFCOM coronavirus broadcasting guidelines.
Essentially they risk their licenses if they deviate from Govts line or that of their authorised agents (like SAGE).
It's impossible to challenge the stories which is why they're getting reckless & stupid.

Twitter friends, we need your help. A few of us have drafted a "Doctors against mandatory vaccination" letter. None of us know how to host said letter in such a way that people can add their names as sort of signatories. Knowing how, it's probably simple. Can anyone guide me?

89 667 1,3 Tsd.

Yardley Yeadon @MichaelYeadon3 · 6. Okt.

The 1sr article which chilled my blood. Perhaps the topmost general medical journal in the world.

nejm.org/doi/full/10.10…

They don't start with mandates. But a paragraph inside says "pressure could be applied by placing those who reject vaccines under indefinite house arrest".

67 378 541

Please take a careful look. There is a 1.1% false positive rate in this PCR test. These kits are global.
But that's not the main problem.

Diesen Thread anzeigen

1

Yardley Yeadon @MichaelYeadon3 · 5 Min.
The answer to your question is OFCOM coronavirus broadcasting guidelines. Essentially they risk their licenses if they deviate from Govts line or that of their authorised agents (like SAGE).
It's impossible to challenge the stories which is why they're getting reckless & stupid.

1 1 1

puffnblow @puffnblow_at_GP · 2 Min.
Thanks for the explanation and an even bigger THANK YOU for all the work you do for us. We would honestly be in the depths of despair and even think we were going mad if it wasn't for your explanations of the science etc THANK YOU :-) !

What's your disagreement? That there is a value for false positives? There is in every test ever invented. U.K. Govt likes to pretend it's zero. It's not. And it matters. It's crucial unless prevalence is quite a bit higher than the FPR. Which is probably will never be,

229E is #also an endemic common cold-causing virus (as stated in article), so you could also say the same thing for 229E, albeit with a lower false positive rate of 1.1% (compared to NL63 of 1.6%) @MichaelYeadon3 ?

Yes. If the PCR test picks up any of the fours endemic, common cold inducing coronaviruses, then around 30% of people with common colds with become a “Covid19 case”.
They are 229E, NL63, OC43 & HKU1, IIRC.

Prof Heneghan recently showed that 24% of "covid19 admissions" arose in this way. If you're a long stay patient, chances rise you'll get a (false) pos eventually. Long stay pats greater risk of dying, too. Overall, a bias upwards to covid19 deaths. I doubt this is accidental.

Antwort an @simonmwuk @back6374 @LonsdaleKeith

Agreed. It doesn't need to explain all the rises to be fraud.
1700 people die every day in UK. No one shut the country down over the 150-200 daily deaths classified as influenza/ pneumonia during late summer, which at the time was 10x covid19 deaths. Why not?

I'm not surprised. My own field of speciality was respiratory diseases, mostly asthma & COPD, some pulmonary hypertension & idiopathic pulmonary fibrosis. Also allergic disorders of respiratory tract & skin. I believe all you wrote.

Diesen Thread anzeigen

1 1

Neal O'Kelly @NealOKelly · 5 Min.

I would say that I would no more listen to Mullis with regard to how PCR should be used than I would to Fritz Haber on the subject of whether I should or shouldn't put fertilizer on my tomato plants.

Mullis was a chemist, not a virologist.

Nevertheless, he understood from the chemistry of it, that it does not, by design, distinguish viable virus from broken fragments; or specific virus from other nucleotide sequences that are the same as those matching the primers. For these reasons alone, his concerns were valid.

I'd love to help, but to focus only on PCR tests is to miss the woods fir the trees. They're distorting all stats. We're told the NHS is on the verge of collapse. But way more than 75% of Trusts have admitted zero or one Covid patient in the last week. Over a quarter of...

You may know I've published on conditions leading to false positives being the vast majority of of positive results?
Well, testing completely asymptomatic students is absolutely certain to deliver 90%++ positives which are FALSE.

Pls ask Sir David Speigelhalter (sp?) to comment.

More importantly where did that eqa image come from? It's certainly interesting if it's genuine, but it's not a viable position that the rising cases are false

2

Yardley Yeadon @MichaelYeadon3 · 10 Std.

Both are distorted datasets. Can't be bothered to explain the admissions but I tweeted earlier about that.

The mech vent data is just lies. 2% of mech vent beds have a covid19 patients in them. Also, they may not be being ventilated. That label just means capability so to do.

1 2

John Rogers @ronnytodgers · 4 Std.

No surprise to those of us who've followed the entire pandemic. Regarding #SecondaryRipple we predicted that:
-would occur in regions not hit as hard in spring
-would NOT be repeated in London
-will grow much more slowly as there are few susceptibles left
Predictions OK so far.

Antwort an @MartinSLewis

If launch is in the next few months, we will have no evidence of long term safety. It's a new platform, so no previous vaccines on which to base the assumption of safety.
The current trials do not look at reductions in deaths or illness from Covid19. That may surprise you.

What the trials are looking at is generation of immune response. We can't be sure of its adequacy in protecting you from illness, from transmission or the risk of death.
Consequently, even if you accept it, it will not end the pandemic or any precautions relating to it.

You are protected by international laws from being mandated or coerced into accepting any medical procedure without your full, informed consent.

The 'health emergency' simply does not require others than those at high risk of Covid19 illness or death to consider receiving it.

I think the new vaccines will probably have a good safety profile. But that should cut no ice. You should require EVIDENCE of good long term safety. That evidence doesn't exist yet.

What if I'm wrong? Even a very low rate of serious harm would mean harms outweighing benefits.

Does anyone know why the mass testing mobile swab units haven't swarmed all over Oxford, Cambridge & London University undergraduates?
Given these are asymptomatic young people then, as the false positive rate is higher than virus prevalence, majority of positives will be false.

If Govt believe the PCR tests work and that asymptomatic people are infectious why aren't they testing blood donors for Coronavirus?

You can't give blood if you have a cold, so wouldn't the blood from an asymptomatic Covid donor carry the same risk to a recipient?

Interesting.

How many have been infected twice? That's why you cannot have two severe outbreaks of the same Covid19 disease superimposed on the same population. This is why London, the epicentre in April, has below normal respiratory cases & deaths now.

Victoria @victoria_allan · 11 Min.

Is it not possible that these are people in hospital for something else that then test positive? Do we know if it's actually covid that's put them in hospital?

1 1

Yardley Yeadon @MichaelYeadon3 · 2 Min.

Of course it possible. Prof Heneghan has some interesting analysis on this point.
What surprises me is that people are so readily accepting of what is obviously the final part of the sole spring wave, which of course isn't repeating in London.

This is very unpleasant but it's not "a public health crisis". It'll be self limiting as before & will kill far fewer now we're much better at managing very ill people with this virus. We've seen more respiratory deaths a few years ago, and it was the last item in local news.

Folgen

Antwort an @SRF_Sally

I heartily agree: & remedies are similar.
Halt mass testing with PCR in the community.
Invite the most vulnerable who are among the most wise, as MP Richard Drax says, and are well able to make up their minds.
All others cautiously return to normal.
Look at London. It's over.

5 44 207

Yardley Yeadon @MichaelYeadon3 · 3 Std.

What the trials are looking at is generation of immune response. We can't be sure of its adequacy in protecting you from illness, from transmission or the risk of death. Consequently, even if you accept it, it will not end the pandemic or any precautions relating to it.

3 6 56

#StopGettingTested ❌ 💉 @Littlejems3 · 45 Min.

Isn't that what any vaccine trials look at? Antibody generation? I assume they just wait and see as far as undesirable effects go? Or is it more scientific?

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @Littlejems3 @MartinSLewis

Vaccines are not my personal field but I understood they usually examine reductions in disease prevalence & severity. Otherwise all we have is antibodies.
They're not even the most important point of immune responses to viruses, which are innate & cellular acquired.

And positives are not cases.
Positives are determined by a PCR tests, that produces false positives, irresponsibly runs on 45 cycles, detects dead virus RNA up to 90 days post infection & does not test for viral load. So how many of these positives are worth their weight in salt?

2 1 4

You can be concerned about both Covid and the effects of lockdown.

1 4

Elle_Bee @Elle_Bee__ · 8. Okt.
True, and think most people are. Just sounded a bit 'herd immunity' plan which many epis disagree with for many reasons, and only quoted 2 people against the mentioned 6,000 others so seemed unfairly weighted. Agree lockdown causes its own harms.

Antwort an @Elle_Bee__ @helen_barnowl und 2 weitere

I don't think anyone is in favour of herd immunity. It's like being in favour of the rain, or of sunshine.
I'm in favour of getting back to normal life, which will occur in every scenario except permanent suppression.
I'm not sure we know the path which has lowest casualties.

Hedley Lamarr @HedleyLamarr20 · 4 Std.
Presumably more likely older people will have more established or innate immunity. So, the risk of them becoming I'll from Covid is lower, but the severity if they do is greater - just like flu, UTIs, the common cold etc. So what's different?

2

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @HedleyLamarr20

Exactly right. Many older people in good health have weathered this easily. But clearly the strongest linkage to vulnerability is age.

I don't think that's correct. It's only true if this single virus is the only agent which alters death rate. And it isn't.
Sorry, it's a fair stab, but it wouldn't be sufficient alone to tell me it's gone.
PCR tests will crank out false positives forever.

For me the point isn't to effect change. It's merely that I will not be a party to something wicked. And the system is totally corrupt frm top to bottom. It will not be changed. If your job requires you to participate in anything from constructive fraud to downright wickedness,

2 1

One of the best human controls is the corporation. Too often, you can't do the right thing without stepping on somebody's toes. Or worse. And you may well find yourself blacklisted in your profession if you do.

1

Stephen Pere @StephenPere2 · 46 Min.
The subtle wickedness of the corporation system is its organization. This organization always employs the structure of compartmentalization. Invariably this is reinforced by carefully composed delineations of authority and discretionary power. The human being is thereby absolved

Antwort an @jenninemorgan @gbdeclaration @Johnny_Brexit

Masks have zero impact on respiratory virus transmission. People who've studied it for 15y, like a colleague of Prof Carl Heneghan has, state that there is no evidence of utility & some that they're harmful.
Everyone is entitled to their own views, not their own facts.

Paula Rudd @PaulaRudd9 · 8. Okt.
We have put these measures in place without consulting the elderly. In Ireland the Gov said and I quote this ' We must lock the elderly in care homes' - you can't do that - they are not prisoners -they have a right to leave. People think they can't leave.

1 2

Germanistin @MsFrauG · 8. Okt.
Everyone needs to wear a mask, socially distance and isolate if infected. Then no one needs to be locked away. It's the mask refusers causing this.

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @MsFrauG @PaulaRudd9 @gbdeclaration

Masks are proven to have no impact whatsoever on transmission of respiratory viruses. We need now to get firm with those playing fast & loose with scientific evidence. That's what the most definitive evidence say, RCT quality. You can't trump it with belief, sorry.

I couldn't agree more.
There's no evidence that ANY of the 'measures' make any difference to the rate of transmission of respiratory viruses. I'm sorry if you believe differently. Your belief does not comprise evidence. It's missing everywhere. Masks, the RCT data is negative.

All true. Not 1 'measure' that bunch of innumerate fools on SAGE recommends has even been hinted at being effective.
If this was a clinical trial, it would long have been halted both for futility (interim analysis tells you it cannot succeed) & safety (it is injuring patients).

If launch is in the next few months, we will have no evidence of long term safety. It's a new platform, so no previous vaccines on which to base the assumption of safety.
The current trials do not look at reductions in deaths or illness from Covid19.
That may surprise you.

Antwort an @RunningClassic1 @MartinSLewis

Yes, of course. Pls check the unique entry at clinicaltrials.gov
There you will see from the primary & secondary endpoints that I'm correct. I'm always happy to be corrected. Thanks!

society, would you have it?

576 500 249

Yardley Yeadon @MichaelYeadon3 · 10 Std.

If launch is in the next few months, we will have no evidence of long term safety. It's a new platform, so no previous vaccines on which to base the assumption of safety.
The current trials do not look at reductions in deaths or illness from Covid19. That may surprise you.

6 85 370

Algernon Parry @AlgernonParry · 7 Std.

Not really. Nothing the Gov does in relation to Covid-19 would surprise me now. A vaccine programme which considers neither risks, nor success at achieving its aim, is right up there with all the other insanity.

You've no scientific knowledge or you wouldn't say something quite so banal & childish.
It's been established for this virus in at least six papers from top labs.
It is understood to be the dominant form of immunity to viruses, not antibodies. Do you know why thst is?

Antwort an @JulieAForshaw @Harvard

It's a new virus, but we have good knowledge of coronaviruses. We know that antibodies aren't vital nor would you expect them to be. Viruses exist mostly inside cells. That's why T-cell immunity is king here & is both robust & durable.
There's no significant doubt about this.

Psyco Bunny @Psycobunny · 4 Min.
What would happen if everyone who didn't want to wear a mask bought an exemption lanyard and card from ebay. They hardly cost anything and if one by one everyone in the country who didn't want to be masked did it it'd be very hard for them to contradict. It also stops challenges.

epidemic with catastrophic consequences in terms of direct COVID related deaths and the ability of the health service to meet needs.

It's all lies. They all need to resign this evening.

24 153 495

damian clayton @d237345p · 2 Std.
Good god. Is that 90% the people who haven't yet tested positive therefore they remain susceptible? What a shower.

1 1 4

Elle @HelenaHannCarte · 2 Std.
I think it's based on the % with antibodies - they are completely ignoring T-cell immunity!

4 1 7

NariceB @thenormaldebate · 2 Std.
How convenient but there a study proving that 80% of pop has T Cell response

3 2

Yardley Yeadon
@MichaelYeadon3
Folgen

Antwort an @thenormaldebate @HelenaHannCarte @d237345p

I think that's possibly an outlier, but five others ranged from 20-50%, so maybe not an outlier.
There are reasons yet to be nailed why some countries had lower fatalities as % pop. One is the 'dry tinder hypothesis'. Differing T-cell reactivity might be another.

...do with "the science" & everything to do with extending this macabre business of irrationally scaring everyone into doing things their instincts tell them are wrong, but doing it anyway, I too would have drafted those appallingly badly thought out "rebuttals". Shame on you.

35 65 498

mav @sidewinder126 · 8. Okt.
One thing I dont understand is... If herd immunity was the cause for falling causes in summer and immunity is not lost due to T cells, why are we seeing a rise in cases again now?? is it directly linked to schools/colleges going back?

1 1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @sidewinder126

Yes. In brief, the most distant regions from the SE epicentre presumably didn't get as infected as London. We're now seeing the last few % getting exposed. It's very hard, but it's unavoidable & will also happen with flu shortly.

2,0 Tsd. 4,1 Tsd. 16 Tsd.

Karl Watchtay7 @kvwatchtay7 · 11 Std.

Covid has an IFR of 0.13%, Flu has a 1% IFR. Covid is 9 times less deadly than flu. And now the PHE are combining flu and covid deaths so it will be impossible to know which is which - or have they always been the same.

10 17 93

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @kvwatchtay7 @piersmorgan

Sorry, incorrect. We've never formally measured IFR for 'flu & the best estimates are around 0.1%.
At present, IFR estimates for covid19 are around 0.3%. We always overestimate lethality during outbreaks because we miss huge nos with mild disease or none. Expect IFR will = flu.

Very disappointing debut. Plays the NHS staff covid19 deaths card. 620. Sounds awful. But is t? NHS has 1.2million FTE. Taking an estimate of 0.3% annual mortality (based on mean age 45y) I get 4000 deaths pa. Tweaking my assumptions doesn't get close to 620, not unusual number.

Hi Michael, do you have any idea how many people are hospitalised in either the UK or England? X

3

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @thewle

You & I can both look it up.
Did you have a reason for asking? Because even if it's high nationally (which it isn't) there are no measures proven to alter the time course or intensity of the outbreak outside hospital. There never have been, either.

BREAKING: Prime Minister Boris Johnson confirms there are more people in UK hospitals now with Covid-19 than when we went into lockdown on March 23.

2,0 Tsd. 4,1 Tsd. 16 Tsd.

Yardley Yeadon @MichaelYeadon3 · 42 Min.

We were testing so few that ONLY those w severe symptoms got tested. Now all admission tested & longer stay patients get repeated tests. Many aren't admitted for covid19. 24% caught it in hospital, still classed as 'Covid admissions'. Discharges well up.
MISLEADING comparison.

Spot on.

Who remembers going to chickenpox parties as a kid. My parents and others advocated these, they knew what immunity was and how to keep their kids health. I was never vaccinated as a child just had a BCG at school and that was my choice back then.

This is extremely good quality information. Note that there isn't the slightest hint of a public health crisis, nor that there'll be one. People are admitted in their hundreds daily, likewise discharged. It's clear that Covid19 cannot again become the scourge of spring.

Joel Smalley @RealJoelSmalley
@BorisJohnson and the disinformation police are spreading fear propaganda about hospitals again. Here is the truth of the matter, albeit up to end of Sept but you can work it out for yourself. Remember the COVID patient defintition is ANY patient with...

34 207 346

Jeremy Hooper @hooper_jeremy · 2 Std.

This has been known since the modelling in April and obvious in the weekly mortality data, the question is why have the media not been reporting this. The price of lockdown is 200,000 deaths from other causes. This is the price of lockdown, as the April modelling says.

1 3

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @hooper_jeremy @EdConwaySky

And not a price worth paying. Lockdown didn't reduce transmission because it mostly occurred in places unaffected by lockdown: hospitals & care homes.

Antwort an @SteveBakerHW

It's unwise to do this especially now. While children do very rarely get very ill & die from 'flu, it's such a low frequency that I much doubt it's cost effectiveness. Given that, why is it being done? And why now?

I intend to write these two simple but crucial points & publish it.

If I'm right, the conclusion is inescapable: people of Britain must determine that they no longer have any confidence in the competence or honesty of SAGE.

I open myself to the full force of questioning by...

> **Yardley Yeadon** @MichaelYeadon3
> Antwort an @DarrenPlymouth
>
> SAGE simply does not understand prior immunity not its magnitude. They wrongly think 100% of us were susceptible. Idiocy.
>
> SAGE also believes the % with antibodies is the % infected. Dear God....

Worse, Vallance seems to have forgotten all about Principles of Immunology (Ivan Roitt), a textbook used by all undergraduates studying fields that link to immunology.

Odd then, that recent SAGE member, Callum Semple, also presumably signed off on that SAGE minute yesterday?

I say odd, because Semple actually studied immunology under Ivan Roitt. Yet unaware of immunity.

Dr Roitt wouldn't be pleased that so many of his students have forgotten basic principles of acquired immunity. Roitt is a colossus of British science. He's still around, at 93.

It is genuinely surprising that the media don't even show an interest in what's happening to death rates & adequacy of treatment for other illnesses. It's as if the country is just a writhing mass of Covid19 & literally all other medical issues have disappeared.

You're missing the point that the other 97% are not going to increase by the same rate that COVID can. We're not going to see a doubling of cancer deaths in the next few weeks, for example, but with COVID that is possible.

6 1

Yardley Yeadon
@MichaelYeadon3

Antwort an @T1000Jay @hughosmond

That's incorrect. There are many other respiratory viruses, several of which do rise steeply at this time of the year & lead to morbidity & mortality.
There is no evidence that nationally Covid19 will again be a public health emergency.
SAGE: many modellers, no immunologists.

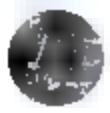
breaker" lockdown is imposed over the school half-term break, an intervention that puts new pressure on Boris Johnson to order tougher restrictions.

Graham Medley, who sits on the Scientific Advisory Group for Emergencies, and Matt Keeling, a member of the Scientific Pandemic Influenza Group on Modelling, will release their findings in a joint paper on Wednesday.

They say thousands of deaths — between 3,000 and as many as 107,000 — could be avoided by January if a national lockdown is imposed over the October break.



307 681 833

Matthew Garrahan @MattGarrahan · 3 Std.

To clarify: the vast range comes from a series of scenarios outlined by Profs Keeling and Medley which include variable factors, such as speed of the virus's growth and level of controls. In all the modelled scenarios, they project the circuit breaker will save lives

14 11 26

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @MattGarrahan

That's because they've assumed terms in their model related to lockdown.
IT DOES NOT MESN that lockdown will work. To fail to understand this distinction is a ghastly failure to appreciate what is happening here.
Most of SAGE members who appear on TV are mostly NOT medical docs.

Current recovery range is 97-99.75% though lack of testing in certain countries, makes those error bounds optimistic. So somewhere between 3/100 and 1/400... Fairly big range to decide to take a gamble - I'm assuming you're planning an declining medical care, if you do catch it?

The key to unpicking true from false positives is the relationship between false positive rate & the actual prevalence of the virus.

If prevalence is 0.5% & FPR is 1.1%, then in 10,000 tests, 50 real positives but 110 false positives.

Real is just 50/160 or 30% of positives.

Antwort an @pdubdev

The key to unpicking true from false positives is the relationship between false positive rate & the actual prevalence of the virus.

If prevalence is 0.5% & FPR is 1.1%, then in 10,000 tests, 50 real positives but 110 false positives.

Real is just 50/160 or 30% of positives.

Well done, Andrew!
This is THE central point. Lockdown did not slow transmission or reduce deaths in the spring. Lockdown started AFTER the peak of infection had passed. That's right: it was falling hard, all on its own. LD doesn't work because it reduces contacts which are...

Your error is assuming you know the counterfactual, what would have happened without those measure.

Plain fact is that you do not know.

We do know, however, that in some geographies, the extent of prior immunity was so great that exponential transmission never occurred.

Strong evidence of what I'm saying. This isn't faintly a surprise to those who are 'wet science experts', those whose training is experimental & real world.

It's mathematicians, who can't distinguish pneumonia from chronic bronchitis, who are running fatally flawed models.

Seriously folks. You must stop them.
They might even mean well.
But they're simply the wrong people, the wrong background & qualifications.
If you allow them to continue to manage the pandemic, their policies will add to the avoidable death toll, not reduce it.

I'd settle for any competent, honest scientist in charge.

Big charge: the scientists in charge are not competent.

They're also not honest.

I'm happy to be sued. I'd win. And they know it. I'd welcome their coming at me. But like cowards, they don't.

limitations of these models, such as imperfect data and assumptions made about human behaviour.

1 2

Science and Technology Committee @CommonsSTC · 10. Juni

We also heard how epidemiological models can be made better using data and how they might inform the response to a possible second wave of #coronavirus. Stay tuned to hear how and why the Government used certain models and assumptions to inform its response.

2 3

Science and Technology Committee @CommonsSTC · 10. Juni

Our second panel has now started. We're talking to Professor @neil_ferguson, @warwickuni Professor Matt Keeling and @LSHTM Dr Nicholas Davies about how their models have helped to inform policy.

Neil Ferguson is either utterly incompetent or he's dishonest.
Since at least one accusation is demonstrably correct, I would appreciate it if you'd draw his attention to my claim. If he thinks I'm traducing him, he should respond. I'd welcome it as I'd win as 'fair comment'.

I'll bite - where's your 25-30% infected figure from?

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @MichaelFalla

1. Based on infection fatality ratios which are estimates from various sources. It's not this low, but easy maths. If IFR was 0.1%, 1:1000, then 43k deaths is 43m infections. I think IFR might be 0.3%, 16m infections, 25% ish.
Also, looking at what % seroconvert after infection.

We know only that severe cases pretty much all show antibodies. Secondary family cases often have zero antibodies.
Based on large nos of asymptomatic or mild cases, I'm hunching a factor of 2-4x lands us close, so 14-28%. Ive used 21% as guesstimate & it sits with the IFR value.

Check armed police closing a gym in Liverpool. I wish I could say I'm surprised. I'm not. I doubt we've more than a few weeks to save our liberal, democratic way of life.
If you (with me) don't rise up & say "no more, no further", that will be that.
It's not late. I'm not tired.

64 512 1,3 Tsd.

Mr. Rabbit @twitchy56209254 · 51 Min.
What is your proposal for 'rising up'.

Genuine question. Everyone says, "Resist", but no-one is prepared to say how it's to be done.

Tell me your plan, then I'll tell you mine.

9 - we now know that the average age of victims is 82. We know which conditions make people vulnerable. We know the virus has a long incubation period and can stay on some surfaces for days. We know 10 times what we knew before lockdown. We know young people are resilient to it.

1 6 35

The Statistics Guy Jono @Jono61698712 · 20 Std.

10 - What we also know is that by the time we see a covid spike any action we take is about mitigation. The spike is an indicator. We also know lockdowns are the worst form of treatment, the hammer and the flea. It is a steam roller to crack a nut. Lockdowns are madness.

3 7 42

The Statistics Guy Jono @Jono61698712 · 20 Std.

11 - So what is the answer? Well we know many things, we know that by the time of national lockdown the cases were running at up to 120,000 new infections per day. Therefore it is highly likely we have seen since January 5 million people at least be infected. That is huge.

2 5 28

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @Jono61698712

I believe we've actually had 17 million infected. Latest IFR of 0.25% & 43000 deaths gets us to 17m or 25%. Interestingly if I mangle adjustments for missing prevalence of antibodies (mildest cases don't convert) I estimate 21-28% by serology.

(Submitted: 13 May 2020 – Revised version received: 13 September 2020 – Accepted: 16 September 2020 – Published online: 14 October 2020)

Abstract

Objective To estimate the infection fatality rate of coronavirus disease 2019 (COVID-19) from seroprevalence data

Methods I searched PubMed and preprint servers for COVID-19 seroprevalence studies with a sample size > 500 as of 9 September, 2020. I also retrieved additional results of national studies from preliminary press releases and reports. I assessed the studies for design features and seroprevalence estimates. I estimated the infection fatality rate for each study by dividing the number of COVID-19 deaths by the number of people estimated to be infected in each region. I corrected for the number of antibody types tested (immunoglobin, IgG, IgM, IgA).

Results I included 61 studies (74 estimates) and eight preliminary national estimates. Seroprevalence estimates ranged from 0.02% to 53.40%. Infection fatality rates ranged from 0.00% to 1.63%, corrected values from 0.00% to 1.54%. Across 51 locations, the median COVID-19 infection fatality rate was 0.27% (corrected 0.23%): the rate was 0.09% in locations with COVID-19 population mortality rates less than the global average (< 118 deaths/million), 0.20% in locations with 118–500 COVID-19 deaths/million people and 0.57% in locations with > 500 COVID-19 deaths/million people. In people < 70 years, infection fatality rates ranged from 0.00% to 0.31% with crude and corrected medians of 0.05%.

Conclusion The infection fatality rate of COVID-19 can vary substantially across different locations and this may reflect differences in population age structure and case-mix of infected and deceased patients and other factors. The inferred infection fatality rates tended to be much lower than estimates made earlier in the pandemic.

Introduction

22 145 322

No Problem @venivici27 · 3 Std.

Methinks that ultimately Ioannidis estimates are overestimates because serology studies underestimate the actual rate of infection.

it is i le coolio @_____coolio · 7 Std.
what if those 25-30% thresholds - if correct - were a function also of the interventions in place at time AND unfavourable seasonality - not just community immunity? Seems logical to me that that immunity threshold could be higher entering winter, or if restrictions loosened

1

it is i le coolio @_____coolio · 7 Std.
Also, an uncontrolled outbreak appears to be able to overshoot the threshold (attack rate >> threshold) which would be a strong argument for maintaining countermeasures to mitigate the risk.

It is a secondary ripple arising from incomplete mixing earlier in the year.
It's unavoidable.
Not nice.
It will soon crest & decline.
Then other winter viruses will dominate & hundreds often die per day. As most winters.
Pls say thank you from me to your daughter!

3 6 13

The Diplomat @TheDipl57726439 · 9 Std.

This surely is the area your thesis must explain supported with data rather than hypothesis...massive testing; asymptomatics, false +ves, residual post "infection" tests, other Coronovirus pathogens...versus real symptomatic cases. SAGE, politicos & MSM just see "daily cases"

1 1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @TheDipl57726439 @harrybenson6

I believe mine are parsimonious explanations. SAGE is completely off the reservation with their starting assumptions of 100% susceptibility & just 7% infected by serology.
No serious life scientist would accept them even if they couldn't say with what to replace them.

Antwort an @jengleruk @justin_hart @florian_krammer

Yes: better than what we're doing now, there's no protection, focused or otherwise, being afforded to the vulnerable.
Acting in ways which greatly extends the duration of the outbreak will definitely kill more people from both covid & non covid19 causes.
Morally reprehensible.

I've just checked the qualifications & current roles of the 31 originating signatories to the Jon Snow Memorandum. Disappointingly, there are no people who could classify as clinical immunologists. I believe that's also the fundamental gap on SAGE. I don't doubt sincerity.

It's growing less tenable by the day that Sir Patrick retains the confidence of the government & the country.
In brief, he should resign because we no longer believe he knows what he's doing & worse, because we no longer trust him
Please retweet if you agree. Argue BTL if not.

No. They haven't worked because only a minority of transmission occurs in the community away from hospitals, schools, care homes & certain large employers where people are inevitably close working for hours, like fresh food prep.
None are affected by LD. Nothing much changes.

Mike, can you check the claim that 'Covid IFR is several times worse than flu'.

Ref2 seems to link to a 2019 article.

I thought CFR is now around 0.3%, in line with flu?

Of course the whole thing is riddled with other unfounded assumptions.

such as businesses going under, job losses, mental health issues, delayed treatments, kids welfare etc. They need to start viewing the impact of Covid in the round rather than just the cases.

30 64 246

Simon Bruni @SimonBruni · 17 Min.
Do you know what happened when the Spanish flu ran rife?

Businesses went under, jobs were lost, all the doctors died so nobody could get treatment, kids were orphaned, etc, etc. And on top of that millions of people died.

6 1 10

Yardley Yeadon
@MichaelYeadon3

Antwort an @SimonBruni @JamesMelville

Spanish flu had an IFR far greater than SARS-CoV-2. Please get perspective.

Worse, we have the evidence that lockdown etc doesn't slow transmission. I wish it did, but the data are solid.

We even understand why: the bulk of transmission occurs in settings NOT AFFECTED BY LDs.

Hope @HopeFrequency · 12 Min.
That's precisely right, efficacy decreases with age and for the very young. Like a bell curve. It won't work for the very age group we are trying to protect. They will be relying on the immunity of the young. This sounds eerily similar to herd immunity?

1 11

Yeah, it will give them the excuse for boosters every year, and we can keep the masks, lockdowns, social distancing and all the other nonsensical bullshit aswell.

1 4

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @ll_Gatto__

It won't solve anything at 50% efficacy because we will not know who's protected & who's not.

The trial endpoints exclude measures of reductions in severity, or of deaths or of transmission.

Initially, just antibodies, which aren't necessary or important in handling viruses.

You're ignorant. Lockdown has never been shown to cut transmission. Thus it will not reduce admissions or deaths.

It will however lead to increased hardship, suffering & deaths from non covid19 causes.

It's the most cruel, stupid & immoral positions I've heard.

Shame on you.

According to Kate Bingham, who leads U.K. vaccine task force, the best we can expect is 50% protection, like flu vaccines.

We should also expect vaccines NOT to protect the most vulnerable: the old & already ill.

Is this what you expected?

76 309 573

Emma P #KBF #UsforThem @Pondleg · 20 Min.
This is not good news at all - if the vaccines won't protect the old and vulnerable, the next step will be to try to give them to the young and healthy instead to achieve protection that way!

81 317 589

Jack Frost @whackfrost · 11 Min.
It means the pressure will really be put on the not-at-risk to get vaccinated to protect the so-called vulnerable.
So, who is up for letting their child have this new vaccine?
The risk of Covid to your child is almost zero. What will be the risk from the vaccine?
After you.

Antwort an @whackfrost @JamesDelingpole

Quite. It's an evil proposition even as you write it.

It would be illegal & unethical to say the least.

These can ONLY be used in at high risk people, because we've NO long term safety database. That matters little if you're 80 & vulnerable. V different if you're 17.

Can it stop me from spreading the virus?
No.

Dose the vaccine guarantee I'll be protected against the virus?
No.

Try prove me wrong.....

Antwort an @SCRAP_IRON_RYAN @JuliaHB1

Herd immunity is a continuum. It's effectively working in London.
Once R is permanently below 1, you'll still get sporadic cases. We'll live with that. We do so for very many endemic infectious diseases for which we don't have vaccines, literally scores of them.

Hello, I could use a favour. I thought I've previously seen an official report on seroprevalence of antibodies to SARS-CoV-2 at around 7% nationally (higher in London, lower in the regions).

I can find reports but none say around 7%.

Anyone have the reference if it exists? Ta

I know Eamonn is right. It was probably not allowed that he told us that due to OFCOM rules “you are not allowed to question the governments narrative”.

Tough. They will need to murder me before I’ll stop calling them criminals. That’s what they are. Their actions killed 1000s.

> **Britain the COVID nightmare. #KBF #NoMoreLockdowns** @AntiWokeBritain
> Antwort an @AntiWokeBritain @saveourrightsuk @Francis_Hoar
> "You are not allowed to the question the narrative on such things. There are restrictions on broadcasters...". Eamonn Holmes actually confirms this fact in an interview with Denise Welch on live tv. See Youtube video starting approx 8:12 youtu.be/MFqpt9UuKCY

Its just possible that this is true.
At any moment at this time of year, 3% of us is carrying a common cold-inducing coronavirus (HKU1, OC43, 229E or NL63).
There is part of the sequence in S2 (not the spike protein but near it) thats highly homologous between them and sars-cov-2

Helen @Helen29260350 · 10 Std.
Frightening scenario. There are so many frightened people who think we should lockdown. I don't,as I prefer to live my life using my innate common sense. K&C hospital still has no Covid patients,according to someone I know.
Is it loss of face worrying BJ? Who knows?

> **Helen** @Helen29260350
> So there has to be permanent lockdown across UK. Don't allow anyone to go anywhere or do anything. The only way to stop the spread. However what happens when lockdown is lifted? The virus is still out there it won't be eradicated so we have to learn to live with it,like flu

4 13

Yardley Yeadon
@MichaelYeadon3
Folgen

Antwort an @Helen29260350 @HopeFrequency

My nearest is also K&C. Empty of covid19, huh?

Then why are services so unavailable. A blood draw is so complicated I've delayed mine as it's too many moving parts. It's a barrier to compliance.

Jo Sheeran @JoSheeran4 · 20 Std.
what has become of this country? Decades ago we sent young men off, who were willing to risk their lives, to fight for our freedom and way of life. Now we are so scared of a virus with a 0.3% fatality rate we are happy to relinquish all our rights and stop living.

Please read this thread but particularly this tweet. THESE ARE NOT COVID DEATHS, only 11% are older that me (60y).

Come on, folks in medicine. You cannot maintain the pretence that “this virus sweeps the land, killing 0.9% of the mostly old”.

THE PANDEMIC IS OVER

> **Dr Clare Craig FRCPath** @ClareCraigPath
> Spring 60% of cases were over 60. Summer 11% were over 60. The increasing proportion of asymptomatic ‘cases’ is another clue. In spring there was a tight relationship between diagnosis and time to death. This was lost in summer. cebm.net/covid-19/publi...

Antwort an @OneFactorial @jim_slip und 2 weitere

Surgeons often do not wear masks. Such masks don't reduce post surgical wound infections. Cut the myths on masks & surgeons because you don't have the knowledge.
Some surgeons wear masks to prevent blood going into their mouths.

Completely agree. It is illegal to mandate or coerce people to accept medical interventions, including vaccines.

While there may be a defence to such a policy in a true public health emergency but CoV19 is miles from that. Population lethality (0.06%) is slightly >seasonal flu.

503 645 4,5 Tsd.

Ian Gowland @ianbigblue1 · 15. Okt.

That's absurd.. It's the one thing we know will work. If the virus is confined for a short period it runs out of places to transfer too, is unable to multiply & stops being infectious. We have known that fact since February...We isolate for 14 days because of it...Exasperated!

we need change to our political engineering system.

1

Melbourne Prisoner @melbprisoner · 16 Min.
Cochran, though, is in the pro-war camp, defending the pseudoscientific lockdowner position. He thinks countries such as Sweden are only ~1/3 of the way to herd immunity, despite all evidence to the contrary.

1

Gregory Cochran @gcochran99 · 13 Min.
A herd of herd immunity has to work on past cases, like the 1968 Hong Kong Flu. These notions that predict 10-20% fail on previous cases (~ 70% of people eventually got it in '68.

But that's only because they're bullshit, the product of wishful thinking.

1

Melbourne Prisoner @melbprisoner · 10 Min.
10-20% seroprevalence would be 60%+ exposure, though. Then you have modeling of heterogeneous susceptibility by @mgmgomes1. Do you dispute that we've seen signs of strong community resistance in cities when they reach 15-20% seroprevalence?

2 1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @melbprisoner @gcochran99 und 6 weitere

Exactly. The numbers won't always add up. But acting as if there isn't substantial community protection after the intense event in spring is irrational.

Laura Dodsworth @BareReality · 39 Min.

Shiny ad for the UK's Decade of Health, on tv last night. Yet:

- The decade starts with over 28,000 non-Covid deaths at home above the average
- NHS screenings and treatment cancelled for many thousands
- 200,000 predicted to die from lockdown in the UK

Andy Kenyon
@itsandykenyon

Hello Everyone :-)

Warwickshire

Beigetreten Juli 2011

What is Operation Moonshot?

OPERATION Moonshot is the name of the Government's newly proposed Covid-19 mass testing scheme.

Moonshot testing promises to deliver coronavirus test results in just 15 minutes.

It would take the form of mass at-home testing and could see up to 10 million tests carried out every day from the comfort of people's own homes.

The test would not need to be processed in a lab to be developed, so that users get their results in a matter of minutes rather than days.

Similar to a pregnancy test, the saliva test would eliminate the need for people to travel – sometimes long distances - to testing centres before returning

running even before a Covid vaccine has been developed.

Under the plan, Brits would swab themselves in the morning and be given a 24-hour pass to mingle without having to stick to social distancing rules.

A person could prove they had tested negative by either electronically presenting their result, or showing a printed card.

The tests are reportedly due to be trialled in the Covid hotspot of Salford from this month.

However it comes with a steep price tag almost as much as NHS England's £114billion budget in 2018/19.

The Moonshot proposals come as the current testing programme faces considerable criticism for

Antwort an @MichaelYeadon3

So under previous WHO leadership, the standard course of action was to "make a list, check it twice", then WHO gets DG Tedros, with 3 mismanaged Cholera epidemics under his purview and the rest is history.

Awful isn't it?

I have a pal who's part of intensive care bed planning.

He showed me record low % occupancy in summer & that drew me into this fight.

The reason?

Management ran loadings NHS light all year "to prepare for 2nd wave".

Viruses don't do waves. Humans make them.

I've been a Bowie fan since I was about 11 or so. Mention made of Bowie. I can't explain how much I miss him, almost every day.
The song de jour for me is the unbelievably beautiful "Win". In recent weeks I've played in scores of times, because what I'm doing is no more than...

4 3 20

Yardley Yeadon @MichaelYeadon3 · 5 Min.
... tracking his lyrics.

"It seems you're trying not to lose".

"All you've got I do is....win".

I've long realised that I / we cannot win through science.

But we must not lose the scientific argument.

Don't underestimate how big an ask this is. Before anyone could do this they would have to be prepared to be telling people that they are not only being lied to on an industrial scale by their own Govt and that it is not due to incompetence, it is with malintent. A big ask!

Antwort an @LtdCfp

I'm asking them only to identify that the information given is demonstrably wrong.
No one needs to suggest motive.
I know accusing others of incompetence IS a big ask.
It's advantage is it's empirical. You don't need to look into someone's heart.
Anyway just a thought.

Antwort an @catlogic2020

How do you know it's rhinovirus? Did you a common cold?
There is a large number of different viruses capable of producing symptoms we call the common cold.
Around 25-30% are caused by endemic coronaviruses.

I have a pal who's part of intensive care bed planning.

He showed me record low % occupancy in summer & that drew me into this fight.

The reason?

Management ran loadings NHS light all year "to prepare for 2nd wave".

Viruses don't do waves. Humans make them.

6 40 79

angie brooks @angiebUK · 21 Std.
It's worse than awful Michael. It is beyond comprehension how this is going unnoticed by MSM. I feel like there are glimmers of hope which are then drowned out by misinformation. I don't know how we are going to get out of this and back to how we were. What is it going to take?

1 3

VanessaFiji **#BanPalmOil #StillWithCorbyn** @VanessaFiji · 14 Std.

Unfortunately you're wasting your time. It's certain that "lockdowns" have close to zero impact on transmission of respiratory viruses.
We've known this for decades. By all means stay home yourself.
But don't pressure others into damaging, ineffective "measures".
M Yeadon PhD

This is very good. I do hope Tegnel & Heneghan told Boris that "control the virus" was always risible & hubristic.
In any case, while we were arguing about effectiveness of one or other 'measures', the virus has all but completed its passage through the population. It's done.

Mark Jones @MarkJones48 · 13 Std.

I've never understood how that is remotely feasible. You can't just lock up the vulnerable and allow those considered low risk to get on with their lives. It is also a belief predicated on people living their lives in separate spheres. It's just not practical.

Antwort an @MarkJones48 @GMB

Unfortunately there isn't a choice in the end.

While academics have debated how to slow down the virus, it has all but completed its full passage through the population.

SAGE's nonsense: "90%+ of the population remains susceptible" is appalling inaccurate.

It's <40% & done.

Will S @willdsenior · 13 Std.

What's the cut of for low risk anyway? Do overweight men in their 40s and 50s count as high risk? There are a lot of people arguing for it who would probably end up being locked up if it was implemented

If this still mattered (it doesn't as the virus has just about completed its full pass through the population), I'd recommend people be given information on the basis of which they'd decide their own actions.

Absolutely agree with this.

One of the worst actions in this incompetent & lethally run drama was to try & stamp out passage of a harmless virus through the young & fit.

That hubristic & mistaken decision probably cost others their lives.

Sick of the ignorant hurting others.

Beefy (working on my modelling) @Beefy49163665

Antwort an @Beefy49163665 @MarkJones48 @GMB

The other thing, as the professor alluded to at the end, is research suggests lockdowns increase the death toll by making it more likely that at-risk people will get it. Young people reduce contacts and don't spread it so much, so older people more likely to be exposed.

Heather Taylor @Heather_Adactus · 10 Std.
Like those young people who are suffering from isolation. We have finite resources so it wouldnt be about isolating them, it would be investing those resources so those people visiting etc could be tested prior (rather than testing and isolating people continually at little risk)

3 1

Glum Gary @glum_gary · 10 Std.
How soon to a visit should people be tested bearing in mind the incubation period of the virus, or do you think a negative test means that you aren't infected?

1

Heather Taylor @Heather_Adactus · 9 Std.
It is far better than nothing. In most parts patients in caring homes are already locked up without any visitors& you can die from isolation, its a huge killer.The average life expectancy in a care home is under a year.

2 1

Antwort an @Heather_Adactus @glum_gary und 2 weitere

They don't care. Nothing has been done on care home visits.
Actions & inaction have been decided that, repeatedly, have heightened suffering & increased overall deaths. As if covid19 is all that matters. It's ignorant & sadistic.

1. Get bent.
2. Levitt is a scientist not a prophet. He did the courageous and scientifically CORRECT thing--he made concrete, falsifiable predictions. Perhaps some of them were falsified. What is the problem?

1 5

Craig Hartsough @CraigHartsough · 17 Std.

Dr. Levitt has *not* done the scientifically correct thing. The correct thing would be to admit that your model has failed and move on, rather than continuing to provide bogus forecasts to anxious, trusting people around the world.

3 6

DocDM @DocDM4 · 15 Std.

It was hugely more accurate than the berserk projections of @neil_ferguson and others, since you show a preference for "accuracy", why do you then choose the least accurate model to fuel your fearmongering ? P.s. median mortality is 0.23%, endorsed by #WHO

Sorry to butt in: Ioannidis' latest global update indicate IFR in 0.15-0.2% range? History of lethality estimates for new infectious diseases always OVER-estimates lethality in the eye of the storm? As we fully appreciate nos infected, IFR falls.
It'll = 'flu in the end, I think.

I suggest that we in uk do this for a week or two as well. I am confident I can anticipate the results.

I say again: the UK pandemic is essentially over but it's not being permitted to fade into the noise of dozens of other respiratory viruses, because SAGE won't allow it. WHY?

I say again: the UK pandemic is essentially over but it's not being permitted to fade into the noise of dozens of other respiratory viruses, because SAGE won't allow it. WHY?

> **Dr Clare Craig FRCPath** @ClareCraigPath
> Spain have dropped how many tests they are doing and the cases have fallen exactly in line. This is evidence of a false positive pseudo epidemic. twitter.com/plaforscience/…

mask.

2 13

Ben Magelsen @benmagelsen · 18. Okt.
I see the biggest problem being mask seals around face. Otherwise, CDC may be right. I have taken 5µm inorganic particles, put in suspension, and filtered through woven cotton to check size of physical filtering and it is largely effective.

4 2

Gundys Face Mask @Gundys_Visor · 12 Std.
So what would be the best guess on a 3 layer cotton mask with a 1500 mpr filter in between layers 1 and 2?

1

Ben Magelsen @benmagelsen · 12 Std.
That should would work better than most, especially if it has good deal around face. Blown polypropylene used in N95 masks is widely used in consumer products and can be repurposed and seams welded with iron. Activated carbon has electrostatic adsorption attraction to nano

I find surprising that the required volume of warm damp air per minute involved in normal tidal breathing can filter particles on which viruses are assumed to be hitching a ride can be filtered when the bulk of that air escapes the respiratory tract from around the edges.

Ben Magelsen @benmagelsen · 18. Okt.

Do you have any idea what type of masks they were evaluating? If the study says N-95/N-100 don't work, I would give up my support for masks. If the issue is the need for effective mask (instead of some minimally viable version), that is a problem that could easily be tackled.

26 25

Aoeui **Innawoods Blacksmith** @aoeui_d · 18. Okt.

MASKS WORK to prevent a sick person wearing a mask from infecting others, and this disease has a high asymptomatic carrier rate. These two things are true. Where the foolishness comes in are healthy people thinking they're protecting themselves from the Rona with their masks.

Eventhedogsaboy @Eventhedogsabo1 · 18. Okt.
The asymptomatic spread claim is unproven and not documented.... Possible but toss it until you can back that up with data/facts....

1

Aoeui **Innawoods Blacksmith** @aoeui_d · 18. Okt.
I have seen the studies showing asymptomatic carriers aren't very infective. That's why I didn't include their infectivity in my op ;)

1 1

Aoeui **Innawoods Blacksmith** @aoeui_d · 18. Okt.
The asymptomatic carrier rate is still definitely very high though. They're probably not very infective, but they're definitely still a high rate.

1

Greg @WWakeUpTime · 19 Std.
It's really not. Read some of Prof. Beda Stadler's work on this. It's basic immunology 101, that asymptomatic are spreaders.

2

Yardley Yeadon
@MichaelYeadon3

BooToYou! @boodad12 · 19. Okt.
The RCT used surgical grade masks(not N95) the type surgeons generally use.

Yardley Yeadon
@MichaelYeadon3
Folgen

Antwort an @boodad12 @benmagelsen @AlexBerenson

Surgeons don't generally wear masks.
They've been proven decades ago not to protect the patient.
Those who do choose to wear masks do so to reassure patients & to prevent splashed blood entering their mouths.

Many studys say otherwise.
Yes, masks minimize the risk to catch the virus.

66 1 6

Greg "Fauxvid-19" Tolan @Greg_Tolan · 18. Okt.
Translation: I wear a mask and I don't want to admit I'm doing it for nothing.

1 2 48

Comput Erpel @ComputErpel · 18. Okt.
From what I have been told, people are supposed to wear masks to protect others, in case the are infected and haven't noticed.

Still, most studies say that you cannot infect others when your virus load is not high enough. Which is the case as long as you show no symptoms.

1 2

Comput Erpel @ComputErpel · 18. Okt.
So either your virus load in not high enough to infect others or you show symptoms and should stay at home.
In both cases wearing a mask is pointless.

2 5

Yardley Yeadon
@MichaelYeadon3
Folgen

Antwort an @ComputErpel @Greg_Tolan und 3 weitere

Excellent logic with which I agree.
Of course there may be a magic window where you're supposedly shedding virus at a high rate, but not yet symptomatic.
I'd expect you to perceive illness long before you're at maximum transmission.

You may not know, or know how to assess how likely this is, but the so-called 'positive test results' are unlikely to reflect discovery of people active infections, and very likely are mostly false positives.

I've good grounds to assert this & will continue until we get the FPR.

Grayphil @grayphil27 · 13 Std.
Well as a Dr, you certainly seem keen to instill the maximum level of fear for this virus. Even in the face or all the evidence, the WHO said that it has an IFR of 0.05 under 70s. But are also aware of all the excess deaths brought about by drops in GDP, which kill more. So why?

1 2

Dr Dominic Pimenta @DrDomPimenta · 11 Std.
So what would my agenda be? Really curious.

3

Grayphil @grayphil27 · 11 Std.
Ahh easy.. You don't believe the many peer reviewed studies (neither does Fauci) that we populations do not have cross reactive TCell immunity.
(and other false hoods, are you alps a fervent herd immunity denier?)

1

Grayphil @grayphil27 · 11 Std.
I deleted some of that accidently so the tweet does read badly. But you get the point.

Antwort an @DrDomPimenta @JamesMelville

Even the WHO does not recommend & indeed actively discourages contact tracing as an NPI, once an infection is endemic.

The reasons that WHO says this are, I hope, obvious.

Cocreatr @CoCreatr · 11 Std.
Thanks for sharing. I get "self-limiting" as when everyone susceptible has been reached. Could be 15-25% of people if others immune, e.g, T-cells. Why do you say "not infectious"?

1

Howard Steen @HowardSteen4 · 10 Std.
Should have perhaps said 'highly' infectious . But implication of non-exponential growth must be that 'R' number never exceeds 1. But R number above one was what was used to manipulate public fear of an 'infectious' agent when in reality it is not very infectious at all.

2

Cocreatr @CoCreatr · 3 Std.
Well, CDC seems to have proven non-infectious on their own terms.

I don't know enough about growth of viruses in cell lines, human or otherwise.
The thing about cell lines is that they are immortal. Provided they've conditions for growth they'll go on doing that forever.
Primary cells I much preferred but they're difficult & expensive to work..

The Statistics Guy Jon @Jon_statistics · 26 Min.
@MattHancock

In June 40% of NHS beds stood empty.

How many staff during this time did you ensure were trained to manage ICU/HDU beds?

And in July?
Or August?

Any, any at all???

#Covid19UK

Also ... why build them then leave all the "highly contagious" people in NHS hospitals. Why not move them and let hospitals operate as normal so we people didn't have to miss out on treatment ?

He didn't answer.
He'd swerved before & did it again.
He referred to ONS's figures.

They're not his & have nothing whatsoever to do with the MASS TESTING operational FPR.

Pls ASK AGAIN: FPR Pillar 2 NOW.

Ask him about cross reactivity with common cold causing coronaviruses.

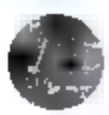
Chris Bryant @RhonddaBryant · 3 Std.

Dear @danwootton sorry, I completely understated the problem in ITU. My local health board ITU is now running at 160% capacity. The Govt talks about beds rather than staffed beds - and a bed without a nurse is just a bed. Nobody wants a lockdown, but we must protect the NHS.

122 188 1,0 Tsd.

Karen Harradine @KarenH777 · 2 Std.

Our demonic politicians are unable to grasp that the NHS is there to protect us and not the other way round. How much longer are we expected to sacrifice our lives for their precious deity? And where are the stats to back up your claim? Something tells me they don't exist.



2 2 18

Andy. @Amysterypenguin · 2 Std.

Well Karen, if you dislike deities with no hard/statistical evidence supporting their existence, I look forward to your future columns demanding an end to religion and G-d worship.

How do you know who is vulnerable - do the vulnerable people's families have to shield? Do the workers in their care homes have to shield? Just so your aware 1/4 of the population is vulnerable - and how well did we protect them round 1?

3 1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @platypus365 @Louise_katz und 2 weitere

It cannot be 25% vulnerable.

The virus killed just 0.06% of the population & that's when we did nothing. I call that unmitigated.
Lockdown was too late.
Masks too late

Perhaps why SWE also saw 0.06% fatalities.

FYI: about 0.9% of the population dies each year. 15x as many.

06:20 - 20. Okt. 2020

Antwort an @DrDomPimenta @garofalides und 2 weitere

You're simply wrong. The word risk encapsulates a ride range.
A tiny number of people die (in total all year around 6% of normal annual mortality).
As I said, most would recognise 10x at a big margin 100x over expected mortality as 'at risk'.
Feel free to debate 'risk'.

Ditto. And all for a virus with an IFR extremely close to flu.

Antwort an @theJeremyVine

Dear Jeremy,
I'd be pleased to take you through the contrasting position if SAGE's view is correct vs if not.
Important to note that the PCR test is being asked to do things it was not designed to do.
Result is that the false positive rate could be as high as 5%.

Jeremy. I don't know if you usually get lots of people trying to tell you that the author of the paper isn't serious. I am serious. I've spent decades in applied R&D and SAGE is wrong. For example, the work I reference to estimate the % of our pop who have been infected is....

says that.
But here you are . Wasting time when you could find out facts. Good evening.

1

Michael Scott @mscott7612 · 20 Min.
I'm pointing out that he doesn't appear to be much of an expert if he thinks we reached herd immunity in August. We clearly didn't.

1

John ™ 2020 ~ oops @johndarts2020 · 14 Min.
The graph seems to disagree.. Herd immunity probably isn't what you think it is. I know a man who can explain. .Long threads though.

1

Michael Scott @mscott7612 · 5 Min.
The increase in cases currently indicates that we do not have herd immunity. How are you going to know what to believe when you do not have experience in the field???

Antwort an @mscott7612 @johndarts2020 und 2 weitere

Are you familiar w. the flaws of the PCR test? Its far from clear that there is 'an increase in cases'. More tests run, sure. But the false positive rate (FPR) is not disclosed. If FPR is 5%, all the so-called cases are artefacts. They may well be ill. Just not with covid-19.

No excess deaths is NOT saying 'there are no deaths'. Sadly, there are always deaths, but the numbers are entirely normal fir our country for the time of year.
Most people have no reason to know this, but 1700 people die every day in UK. All causes mortality is normal right now.

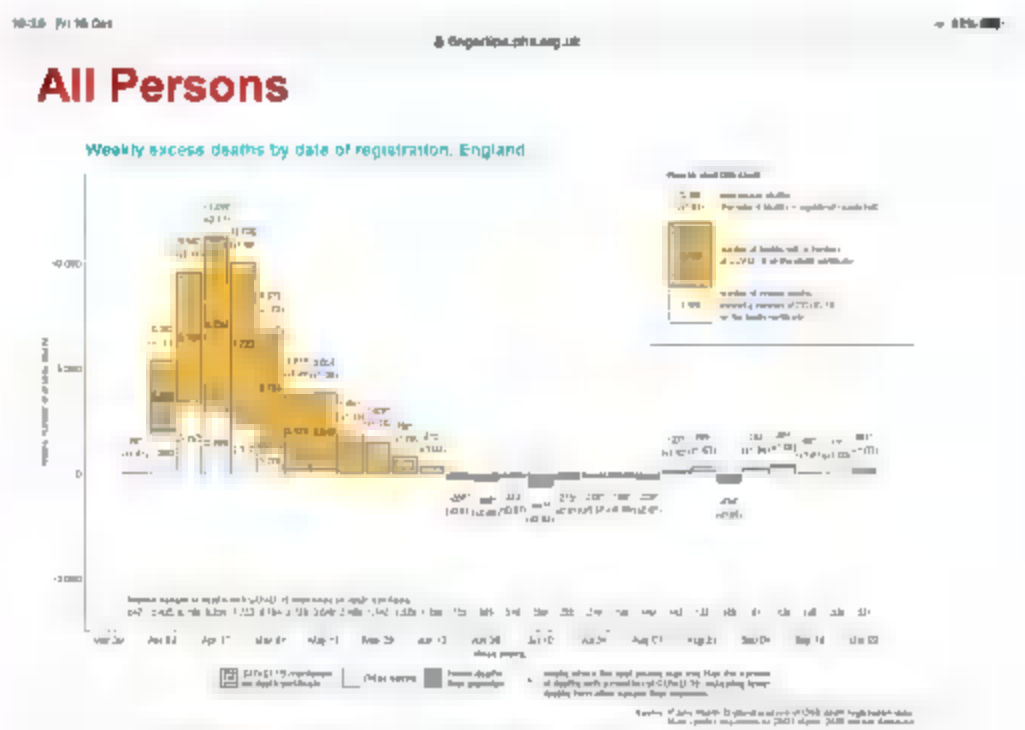

Figure 1: Weekly excess deaths by date of registration, England.

...very many people will require a vaccine. And it's absolutely not required to vaccinate the population. Most people are immune or are not susceptible.
The good news is that COVID-19 cannot return.
